FCC shell: $19 = 1 + 12 + 6$
rhombic dodecahedra, $s = 3$

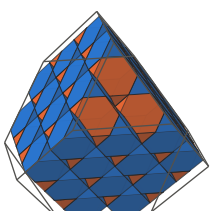

Cartesian shell: $56 = 4^3 - 2^3$
truncated cubes, $s = 4$

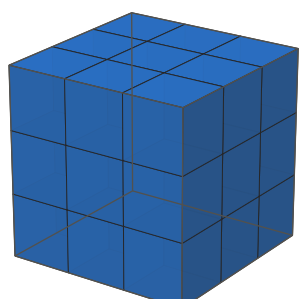

Recursion: $16 = 4^2$
triakis tetrahedra, $s = (5/3)^2$

Two-orientation window: $71 = 40 + 31$
truncated tetrahedra, $s = 13/3$

Lattice tiling: $27 = 3^3$
cubes, $s = 3$ (optimal)

Proven optimal ($n = 2$): octahedra
in a cube, $s = \sqrt{2}$
